Education

Illinois State University

B.S Computer Science, (GPA: 3.73 / 4.00)

Normal, IL

Expected Dec. 2026

- **Relevant Coursework:** Data Structures & Algorithms, Database Design, Java Programming, Systems Development, C++ Programming, Artificial Intelligence, Distributed Systems, Secure Software Development

Technical Skills

Languages: Java, TypeScript, JavaScript, Python, SQL, C++, C

Frameworks & Technologies: Spring Boot, React, HTML, Tailwind CSS

Tools & Platforms: MySQL, GitHub, Bitbucket, Jira, Postman, Linux

AI Tools: Codex, Claude Code, Gemini

Experience

RevCycle Partners

Software Engineering Intern

Glen Ellyn, IL

May 2025 – Aug. 2025

- Developed Java Spring Boot handler files and functions to integrate an AI-driven insurance data autofill feature, converting defined business requirements into working backend components for users.
- Conducted unit testing and API testing (via Postman), alongside QA testing, to validate functionality and ensure reliable performance before release.
- Resolved 6+ Jira tickets per sprint from the feature backlog, contributing to sprint planning and code reviews, and documenting code prior to production release.

Joliet Junior College

Student IT Assistant

Joliet, IL

Aug. 2022 – Aug. 2024

- Supported administrative ERP/business systems including Workday, assisting staff and student employees with system navigation, troubleshooting, and process-related questions.
- Designed and documented a new e-waste disposal process for technology across four college campuses, creating standardized procedures adopted for ongoing use.
- Tracked and resolved over 30+ technology support requests through the IT ticketing system a month, also while assisting staff and students on proper ticketing system use.

Projects

Breezumé – AI-Powered Career System

React, Typescript, Tailwind CSS

[Website](#) | [Github](#)

- Built and deployed a full-stack resume analysis platform using React and Puter.js, integrating Claude API to score resumes across 5 categories to generate structured, actionable feedback from user uploaded PDFs.
- Designed and programmed 8+ AI-driven features including automated and user-directed resume revisions, tailored cover letter generation, and job-title/posting recommendations.
- Implemented job search tooling with a third-party jobs API and an AI-based scam-detection system to flag fraudulent postings, adding per-user rate limiting to manage API quotas across a serverless, backend-less architecture deployed on Vercel.

Library Management System

Java, MySQL

[Github](#)

- Conducted requirements analysis and database design, creating a normalized relational SQL schema to manage books, users, and transactions with data integrity constraints.
- Implemented role-based authentication, password hashing, session management, and parameterized SQL queries to prevent injection attacks across the entire application.
- Tested and validated system functionality across user roles to confirm correct permission enforcement and integrity.
